VINEYARD

VINEYARD DESCRIPTION
The Don Melchor Vineyard is located on the northern bank of the Maipo River, 650 meters a.s.l at the foot of the Andes Mountains. It consists of 75 hectares of Cabernet Sauvignon that are 10–20 years old.

SOIL
The first 30 cm of soil is loam, with a large amount of stones at depth. These soils ensure good drainage and low fertility, which restricts the plants’ vegetative growth and encourages the accumulation and maturation of phenolic compounds.

CLIMATE
The vineyard has a generally semi-arid Mediterranean climate with an average annual rainfall of 350 mm. It corresponds to one of the coldest zones in the Alto Maipo Valley.

It was a season with balanced weather and good temperatures from budbreak through harvest, and low to moderate rainfall enabled the grapes to develop very well. Although seasonal rainfall was 508 mm, only 92 mm fell in late April, and that was after the harvest had completed without problems.
